

Our highly experienced sales and application team assists our clients in taking a project from an early design concept all the way through delivery and start-up. We take the most complex projects and execute them on time and with close coordination to your job schedule. We partner with top-tier companies in their respective markets to ensure that any project we are involved in will be guaranteed by the best equipment in the industry.

High-efficiency, variable refrigerant volume heat pumps and Heat Recovery Systems, air-cooled and water-cooled chillers, central station air handlers, applied rooftop units, vertical self-contained units, fan coils, unit ventilators, water source heat pumps, tempifiers, and heating and cooling coils.

Developing and applying Web-based software and hardware solutions for the purpose of reducing energy and operation costs while reducing dangerous levels of C emissions to our environment.

A leader in indoor comfort, precision, and high percentage outside air equipment design. Above Air also provides innovative indoor HVAC product solutions for commercial and industrial applications.

Variable frequency drives designed for heating, ventilation and air conditioning applications.

Manufacturer of single, dual duct and fan-powered VAV boxes, fan coil units and air handling units.

An innovation green product designed to lower energy costs and provide superior cooling.

Active chilled beams, induction diffusers, and induction unit consoles.

An array of direct-drive plenum fans with integral electronically commutated (EC) motors

Heating elements, fabricates sheet metal, builds electronic controls, and welds ASMI pressure vessels.

Native BACnet Building Automation Systems provide building management solutions for heating, ventilating and air conditioning applications.

Specialty air conditioners for critical electronic system facilities that have sensitive temperature and humidity needs.

An array of direct-drive plenum fans with integral electronically commutated (EC) motors, offering superior energy efficiency and flexible, low-footprint application.

Custom packaged DX and chilled water air handling units.

Ultraviolet technology for air purification and disinfection.

Packaged pumping systems, controls, and packaged central energy plants.

Offering Niagara — a complete control solution for smarter, more efficient buildings.

Classroom Units for healthy and comfortable learning environments

Custom air handling units with no through metal and knock down construction designs.

Air Cleaning and High Filtration Products

Custom Air Handlers

High Velocity Low Speed (HVLS) Fans

Air-Rotation and Custom HVAC systems

The combination of our unique patented one piece casing and the use of the most advanced technology make our towers some of the best available on the market.

Superior critical environment airflow monitoring and control systems for the medical, laboratory, and life science communities.

Air Purification Technology
