

Our highly experienced sales and application team assists our clients in taking a project from an early design concept all the way through delivery and start-up. We take the most complex projects and execute them on time and with close coordination to your job schedule. We partner with top-tier companies in their respective markets to ensure that any project we are involved in will be guaranteed by the best equipment in the industry.

High-efficiency, variable refrigerant volume heat pumps and Heat Recovery Systems, air-cooled and water-cooled chillers, central station air handlers, applied rooftop units, vertical self-contained units, fan coils, unit ventilators, water source heat pumps, tempifiers, and heating and cooling coils

Offering Niagara – a complete control solution for smarter, more efficient buildings.

Custom air handling units with no thru metal and knock down construction designs

Active chilled beams, induction diffusers and induction unit consoles

Heating elements, fabricates sheet metal, builds electronic controls and welds ASME pressure vessels

Custom packaged DX and chilled water air handling units

Variable frequency drives designed for heating, ventilating and air conditioning applications. ABB drives offer application specific functionality, control for different types of motors, as well as, flexible connectivity to automation systems. Available with intelligent bypass and low harmonic options

Developing and applying Web-based Software and Hardware Solutions for the purpose of reducing energy and operation costs while reducing dangerous levels for CO2 emissions to our environment

Packaged pumping systems, controls and packaged central energy plants

Ultraviolet technology for air purification and disinfection

Desiccant and sensible energy recovery and ventilation systems for improving the indoor environment

High accuracy airflow measuring stations and transmitters

Native BACnet Building Automation Systems provide building management solutions for heating, ventilating and air conditioning applications

Single source design and manufacturer of superior critical environment airflow monitoring and control systems for the medical, laboratory and life science communities

Manufacturer of single, dual duct and fan-powered VAV boxes, fan coil units and air handling units

An innovative green product designed to lower energy costs and provide superior cooling. By generating ice during “off peak” hours we lower energy costs by reducing energy demand to the building.

An array of direct-drive plenum fans with integral electronically commutated (EC) motors, offering superior energy efficiency and flexible, low-footprint application

Seresco is the largest, fastest growing and most successful dehumidifier manufacturer in the industry that provide customers with superior energy efficiency, performance and reliability, backed by the best warranty program, service and support of any competitor.
