

Our highly experienced sales and application team assists our clients in taking a project from an early design concept all the way through delivery and start-up. We take the most complex projects and execute them on time and with close coordination to your job schedule. We partner with top-tier companies in their respective markets to ensure that any project we are involved in will be guaranteed by the best equipment in the industry.

High-efficiency, variable refrigerant volume heat pumps and Heat Recovery Systems, air-cooled and water-cooled chillers, central station air handlers, applied rooftop units, vertical self-contained units, fan coils, unit ventilators, water source heat pumps, templifiers, and heating and cooling coils.

Custom air handling units with no through metal and knock down construction designs.

Variable frequency drives designed for heating, ventilation and air conditioning applications. ABB drives offer application specific functionality, control for different types of motors, as well as flexible connectivity to automation systems. Available with intelligent bypass and low harmonic options.

A leader in indoor comfort, precision, and high percentage outside air equipment design, Above Air also provides innovative indoor HVAC product solutions for commercial and industrial applications.

Manufacturer of single, dual duct and fan-powered VAV boxes, fan coil units and air handling units.

Active chilled beams, induction diffusers, and induction unit consoles.

Heating elements, fabricates sheet metal, builds electronic controls, and welds ASMI pressure vessels.

Offering Niagara – a complete control solution for smarter, more efficient buildings.

An innovation green product designed to lower energy costs and provide superior cooling. By generating ice during “off peak hours, we lower energy costs by reducing demand to the building.

Packaged pumping systems, controls, and packaged central energy plants.

Custom packaged DX and chilled water air handling units.

An array of direct-drive plenum fans with integral electronically commutated (EC) motors, offering superior energy efficiency and flexible, low-footprint application.

The combination of our unique patented one piece casing and the use of the most advanced technology make our towers some of the best available on the market.

Air-Rotation HVAC Systems with a wide variety of options and ability to heat, cool, circulate, dehumidify air or add humidity with incredible energy efficiency.

Custom HVAC Air Handling Systems

Single source design and manufacturer of superior critical environment airflow monitoring and control systems for the medical, laboratory, and life science communities.

An array of direct-drive plenum fans with integral electronically commutated (EC) motors, offering superior energy efficiency and flexible, low-footprint application.

We have knowledgeable staff to assist you in identifying and obtaining the right OEM replacement part for all the lines of equipment and controls we represent. We want to make sure you get the right part as quickly as possible to get your equipment back up and running. More than just a parts warehouse, we can assist in the application and installation to make sure your downtime is minimized.

High-efficiency, variable refrigerant volume heat pumps, air-cooled and water-cooled chillers, central station air handlers, applied rooftop units, vertical self-contained units, fan coils, unit ventilators, water source heat pumps, templifiers, heating and cooling coils, and heat recovery systems.

Variable frequency drives designed for heating, ventilating and air conditioning applications. ABB drives offer application specific functionality, control for different types of motors, as well as flexible connectivity to automation systems. Available with intelligent bypass and low harmonic options.

Provides building management solutions for heating, ventilation and air-conditioning equipment for all types and sizes of buildings. Standard open communication protocol gives building owners flexibility in their building solutions. The first to offer a top-to-bottom native BACnet system, a Windows-based operator's workstation, (DDC) technology and more.

High efficiency, variable refrigerant volume heat pumps, air-cooled and water-cooled chillers, central station air handlers, applied rooftop units, vertical self-contained units, fan coils, unit ventilators, water source heat pumps, templifiers, heating and cooling coils, and heat recovery systems

Humidity, current, vacuum and pressure sensing instruments, low pressure calibrators, and weighing and counting scales for a wide variety of applications in the HVAC/R

Ultraviolet technology for air purification and disinfection.

Leading supplier of energy and environmental sensors and control peripherals for Commercial HVAC and Energy Management applications

Honeywell environmental controls, life safety, security, sensing, scanning and mobility products, as well as building and process solutions, are at work in homes, buildings, industrial facilities, and public and private utilities around the world

Heating elements, fabricates sheet metal, builds electronic controls, and welds ASMI pressure vessels.

Manufacturer of single, dual duct and fan-powered VAV boxes, fan coil units and air handling units.

Advanced technology 100% OA units, humidity control for indoor pools and spas

Temperature, relative humidity, pressure, current, gas and interface devices

Highly accurate flow meters and energy measurement systems (BTU meters)

Electric actuators for motorized control devices in heating, ventilating and air-conditioning systems

Product offerings include relays, current sensors, power control, enclosures, power supplies, transformers and accessories

Developing and applying Web-based software and hardware solutions for the purpose of reducing energy and operation costs while reducing dangerous levels of C emissions to our environment.

Open software and hardware platforms that provide edge-to-enterprise solutions and IoT technology for today's intelligent buildings, energy management systems, equipment control and specialty machine-to-machine applications.

Sensors, transducers, control peripherals and web browser based IP Appliances

Packaged and split systems 100%OA applications, hot gas reheat, liquid sub-cool coils, energy recovery systems, special coastal coatings
